This section is *optional* and can be used to provide a summary of recommendations to the IT manager regarding which controls and/or compliance best practices Botium Toys needs to implement, based on the risk posed if not implemented in a timely manner.

Recommendations (optional): In this section, provide recommendations, related to controls and/or compliance needs, that your IT manager could communicate to stakeholders to reduce risks to assets and improve Botium Toys' security posture.

Many controls need to be added in order to secure customer information and align the companies policies with different regulations:

- Although there is currently a password policy I would recommend adopting a more secure password policy with a minimum of 8 letters with at least 1 number, capital letter and special character. If they wanted to secure it more then increase the length minimum requirement.
- Implement a centralized password management system in order to enforce the password policy
- Implement an IDS and an IPS
- Implement an Access Control List
- Implement the principle of least privilege so only employees who need access to confidential data in order to do their jobs can access it.
- Encrypt the customer credit card information and obfuscate their SPII
- Store the encrypted credit card information in a separate secure database
- Classify customer data
- Implement a separation of duties
- Implement a Disaster Recovery Plan
- Deploy Backups and have them regularly updated at scheduled times
- Implement a Incident Response Plan
- Implement a schedule to monitor and perform maintenance on legacy systems
- Implement a intervention method for legacy systems and make sure it's documented in the IRP
- Implement an asset management policy for secure destruction of assets
